TOILET ROLL TREAT TOY

Rio, Quality Control

Materials Needed

- Empty toilet roll tubes (clean and dry, with any leftover paper peeled off)
- A pen or scissors to make openings
- Small dry treats or kibble that will fit through the openings
- Optional: dried catnip or silvervine instead of treats

Why it works: Batting, rolling and “hunting” the tube for its reward gives cats a safe outlet for natural foraging behaviour, right inside the cage.

Step-by-Step Instructions

1. Make the Openings

- Use a pen or the tip of your scissors to poke 3–5 holes around the tube.
- Make them just big enough for a treat to fall out with a bit of batting. Too big and it's over in seconds; too small and your cat gives up.

2. Close One End

- Fold one end of the tube inward, pressing the edges down in overlapping flaps, like closing the top of a box.
- Alternative: make two small cuts on opposite sides of the rim, then fold the flaps in.

3. Add the Treats

- Drop a few treats (or a pinch of catnip) into the open end.
- Give it a shake to check they rattle around and can find their way out of the holes.

4. Close the Other End

- Fold the second end inward the same way so the treats are sealed inside.

5. Let the Fun Begin

- Place the tube inside the cage and watch your cat bat, roll and chase it to get the treats out.
- Remove the tube once it's soggy or shredded, and swap in a fresh one.
